SUBJECT: Project Mobility Platform

1.0 Strategic Objective

Consolidate the UK mid-market automotive tech companies, creating a mobility and vehicle infrastructure ecosystem. ParkingEye is used as the well-established platform with resilient cash flows. This platform will acquire founder led bolt-ons to capture cross selling efficiencies, allow international expansion and lock customers into a closed loop value chain which includes the driver, the physical car park and the leasing managers

2.0 Merger Structure

The Anchor Asset

- ParkingEye: Automatic Number Plate Recognition based car park management and enforcement solutions.

Payment Layer

- TMA: Mobile parking payments app, pay-by-phone software and enforcement logistics tech.
- AppyWay: A kerbside management and smart parking platform that provides solutions for local councils, automotive manufacturers and offers a mobile app for consumer parking and payments.

B2B Solutions Layer

- Ebbon Group: A B2B SaaS platform that connects vehicle manufacturers, leasing companies and dealers.
- Fleetcheck: A B2B fleet management software that centralises vehicle maintenance, legal compliance and cost control for SMEs.

High Growth Addition

- Joju Charging: Couples lower margin EV deployment in residential areas with a scalable software layer.

2.1 Deal Execution

As certain targets operate within a holding structure or within integrated business models, targeted asset carve-outs will be performed on the following:

- TMA Group operates as a larger holding structure, containing assets which would not add any value to this roll up.
- Joju charging also operates residential solar panel installation. We are only looking to secure the engineering contracts and relevant technology integrations.

3.0 Financial Profile & Funding

Combined Financials: Summing all of the target assets yields a total revenue of £117.65m, £40.99m EBITDA and a 34.9% EBITDA margin

Leverage & Debt sizing: The resilient nature of the cash flows provided by ParkingEye and the recurring revenue from the SaaS platforms of Ebbon Group and Fleetcheck means that the platform can secure senior bank debt at a leverage of ~3.5x total debt / EBITDA. This reduces the up-front capital required from the fund. We calculated that a commercial bank can safely lend £143.47m against the platform and the platform displayed a robust 4.08x DSCR.

Multiples: While the platform ParkingEye will command a more premium multiple since it is well established and PE owned, the owner managed bolt-ons can be acquired at a more modest valuation of ~6x EBITDA.

4.0 Market Opportunity

This specific niche is chosen because the businesses are high margin, operating within a growing sector and there's a high degree of industry fragmentation – especially within the EV charging and mobile parking payment sectors.

Company Target Criteria: clear product complement, strategic lock in synergies and strong financials as outlined below:

Target Asset	Value Chain Segment	Revenue (£m)	EBITDA (£m)	EBITDA Margin (%)	TAM growth (%)
ParkingEye	Enforcement & Infrastructure	61.1	28.8	47.1	5.4 (<i>Smart Parking Hardware</i>)
TMA	Mobile Payments & User Layer	22.9	7.4	32.3	11.2 (<i>Digital Mobility Payments</i>)
AppyWay	Kerbside Smart City Mobility	5.2*	-0.05*	-1.0*	14.5 (<i>Intelligent Transport Systems</i>)

Ebbon Group	B2B Automotive SaaS	13.7	3.3	23.9*	8.1 (Enterprise Automotive Fleet)
Fleetcheck	Telematics & Asset Tracking	4.6*	1.4*	29.3*	12.6 (Commercial Vehicle Fleet Management)
Joju Charging	EV Charging Infrastructure	10.1	0.2	2.3	22.4 (EV Charging & Green Infra SaaS)

*AppyWay and Fleetcheck are estimates based on headcounts, industry averages and company maturity.

5.0 Synergy capture

ParkingEye provides a customer base of commercial and retail landlords in which Joju Charging's EV infrastructure and TMA's car parking payment layer can be cross sold. Furthermore, since AppyWay and Joju charging are both selling to the public sector the respective companies can now be sold as a package.

Also, SMEs working with Fleetcheck can be cross sold to Ebbon Group in order to add to or replace existing stock.

6.0 Investment thesis

1. **Valuation Arbitrage:** rolling up founder led companies at a lower multiple into one entity will command premium multiples should we exit. A £70.02 million implied valuation arbitrage was calculated
2. **Diversity of Revenue:** companies being rolled up have exposure to both the private and public sector as well as key international markets such as Netherlands, France and UAE
3. **Growing TAM:** all sectors targeted are growing providing a strong tailwind for organic growth. Furthermore, the high growth industries (EV charging) allows aggressive expansion with a larger company making credit easier to acquire.

7.0 Deal Hurdle

Many mid-market tech companies are PE backed, such companies would command higher exit multiples. In response, the strategy outlined focuses on buying 1 PE backed company (ParkingEye) which serves as a platform for which owner managed companies with strong synergies can be bolted on, exploiting valuation arbitrage. Furthermore, the nature of the companies' individual business models facilitates cross selling opportunities and areas in which costs efficiencies can be realised.
